

## Project milestone #5

(This is worth 25% of the project grade)

Due date: Your demos should be ready by start of your Lab time (week of July 17th), but you can submit a link to your demo by end of the day Sunday, July 23rd.

*Objective: To develop high fidelity prototypes of your project. All team members should work on or contribute to the development/refinement/design of the high fidelity prototypes.*

You will get a chance to demonstrate (live) your high-fidelity prototype in your lab section. All group members should attend the lab. You will get feedback from other lab members and your instructor(s).

You may have made changes to the goals, personas, scenarios, use cases, and prototype as a result of previous feedback. In that case, include the most up-to-date version in your demo.

In your presentation, you should explain the main **usability and/or user experience goals** of your application (20 points), present the **main personas** you developed (20 points), and then demonstrate the prototype you have developed using the main **2-3 use cases** (30 points).

The milestone will be marked out of 100 points, as indicated above. The remaining 30 points will be awarded based on the quality of the prototype (20 points) and presentation (10 points).

Allow about 10 minutes for the presentation in your lab.

*For the submission: Create a link (URL) to your prototype demo and post that inline on Connex. One member of your team should submit this URL before the deadline (see above in red).*
