Imagine Dictations Milestone 3

Use Case 1

Room setup

Connor (the room creator) and his team mates show up for the meeting and Connor has to create the room in order to commence the meeting.

1. The room creator opens the app

2. They proceeds to create a new room

3. They set the room ID and create the room

4. The members search for the room by it's ID and request the room creator to let them join the room

5. The room creator approves the requests and the other members join

6. Finally, the room creator taps the record button and the session begins (See Use Case 2)

Alternative Scenarios

5.1. A member was unable to join the group so the rom creator added the member individually through the room

5.2 the Room creator denies them access and they are unable to join the room

6.1. Once the room creators approves 1 of the requests, other members in the room can approve requests as they come

Use Case 2

Jessica (the room creator) and her team want to start a team meeting together and begin recording the session

Start Recording

1. The room creator indicates that the recording should begin.
2. The application will indicate to all other users in the room that a recording session is about to begin
3. Recording begins

Use Case 3

Ending a session

Connor (room creator), and his team have completed a work session together and are ready to save their work.

1) The Room creator ends the recording session

2) The system ends the recording session for all connected users.

3) Users are notified the session has ended and are returned to the homepage

4) The system sends the session data to all connected users and gives them their own local copy

5) Room creator moves to the history page and chooses the session they just created (see use case 4)

6) Room creator chooses the share option and is given a list of formats and ways to share the session

7) Room creator chooses to print the session data via a wireless printer

8) The system sends the session information to the printer, along with any relevant notes that were added

Alternative courses

7)   User wishes to send the session data to a different application, or via mail

7.1)   User chooses "send to…" option

7.2)   User is prompted to choose an application or service to send the document to

7.3)   The system responds by opening the chosen application with the session PDF or by opening a mail window with the PDF as an attachment

Use case 4

History Access

Connor (the user) wants to access meeting data from a week ago

1) The user chooses the option to access history

2) The system displays all meetings ordered by time

3) the user chooses the option to enter specific meeting details

4) The user enters specific meeting details

5) The system displays all meetings that match the users search criteria

6) The user selects the meeting they desire

7) The system displays information about that meeting.

Alternative courses

3) The user finds the meeting they were searching for manually

      3.1) The system displays information about that meeting

3) The user chooses the option to sort the meetings by different criterion

      3.1) the user finds the meeting they were looking for

      3.2) the user selects the meeting they were looking for

      3.3) The system displays information about that meeting

Use Case 5

Edit Profile

1. User presses the "profile" tab on the bottom of the screen
2. System is now viewing "profile" screen with a few options such as editing the profile, changing the theme among others
3. User presses profile
4. System is now at profile settings
5. User makes necessary changes and saves
6. System saves changes

Use case 6

Personal Memos

Kyle (the user) is looking into his fridge and trying to make a grocery list.

1. The user opens the app
2. The user indicates that they want to record a personal memo
3. The application begins recording
